ABSTRACT

I am Back with the BIG Think of Time Travelling research and still it is impossible one the current Information Technology world. Even though we have Plenty of Super Computers, Nano Computers. Un Imaginable Satellites, Traveling to one earth to another earth in the space in a million core of miles away from our home planet. But Time travelling is different concept which is helped to travel the past and Future. In early days people didn't believed about this even they are not at all able to understand about this mechanism. But those old days it self, Sir ISAC Newton strongly explained about this and he believe we can travel to past and future too.

Keywords:- Time, Super Computers, Nano Computers, CTC, MC2

I. INTRODUCTION

In this particular Article; I am going to talk about Traveling Through TIME as an application of Prof. Albert Einstein's Theoretical statement i.e. "Traveling at Light Speed could nearly stop the TIME". In this paper first I am going to Explain about the understanding about Time Travelling based on the Wikipedia information and current research approaches about this, and my point of proposed approach of Time Travelling. As per wiki information, Time travel is the concept of moving between different points in time in a manner analogous to moving between different points in space, generally using a theoretical invention known as a time machine. Time travel is a recognized concept in philosophy and fiction, but has a very limited support in theoretical physics, usually only in conjunction with quantum mechanics or Einstein-Rosen bridges.

science fiction novel written in 1895 called The Time Machine, by H. G. Wells, was instrumental in moving the concept of time travel to the forefront of the public imagination, but the earlier short story

"The Clock That Went Backward", by Edward Page Mitchell, involves a clock that, by means unspecified, allows three men to travel backward in time.[1][2] Non-technological forms of time travel had appeared in a number of earlier stories such as Charles Dickens' A Christmas Carol. Historically, the concept dates back to the early mythologies of Hinduism (such as the Mahabharata). More recently, with advancing technology and a greater scientific understanding of the universe, the plausibility of time travel has been explored in greater detail by science fiction writers, philosophers, and physicists.

After nearly 50 years of research one of the most fascinating scientific breakthroughs in the history of human society is now being realized in government funded research labs around the world. These development efforts have been advancing several types of time control technologies and the results have reached a performance level that is positioning them to change our world and reality in ways difficult to comprehend.

What many people find surprising is that the technologies delivering the results today are not based upon the popular sciences portrayed in media and movies of traveling faster than the speed of light, near light speed, or through wormholes. They are instead based upon the lesser known techniques in space-time physics of generating fields of closed time like curves (CTCs) and superluminal propagation of information using quantum tunneling. In different ways these techniques allow the transmission of matter, information or living organisms backward and forward in time without the need to make matter move faster than the speed of light.

These developments offer the potential for tremendous benefit to human society on this planet and also risk. To help manage these developments and opportunities wisely we all should understand some basics of time control technologies and methods, the basis of the most effective technologies, the potential benefits and risks of their use, and also the steps necessary to ensure the protection and benefit to human society on this planet. This article was prepared to provide such a summary

II. EXISTING RESEARCH AND THOUGHTS

Dr. David Lewis Anderson, director of the Anderson Institute, had emerged publicly in a two-hour interview on December 23, 2009 to give an extensive account of his time control research for the U.S. Air Force, which he later continued at his Time Travel Research Institute and other organizations.

Dr. Anderson's public revelations regarding time travel follow disclosures made in August and November by Andrew D. Basiago in interviews concerning his experiences in time travel experiments undertaken by DARPA's Project Pegasus in the early 1970s.

A Sept. 15, 2009 report derived from the Web Bot predicted that a "planetary whistleblower" would emerge from the current period of U.S. financial collapse. Clif High, the genius behind the Web Bot, determined that the individual was "very likely" Mr. Basiago, a lawyer from Washington State who is leading a truth campaign to establish that the U.S. defense community achieved teleportation in the late 1960s.

The report also stated that Mr. Basiago's crusade would spark a movement, as other whistle-blowers shared with the public previously secret information.

In fulfillment of the scenario predicted by the Web Bot, both Mr. Basiago and Dr. Anderson are whistleblowers who have emerged during the latter months of 2009 to affirm secret time travel advancements by the U.S. government and private industry that may articulate a way out of the current depression via investment in a 21st century infrastructure that would include teleportation and other new energy applications.

Dr. David L. Anderson

The ALTA-Web-Bot report predicts planetary whistleblowers

The Web Bot project uses software to "search the Internet for about 300,000 keywords with emotional context and record the preceding and following words to create a 'snapshot.' Through this, the technology is claimed to be able to examine the collective unconscious of the world as a whole. The data collected by the Web Bot is then analyzed via Asymmetric Language Trend Analysis (or ALTA) to discern future trends.

In the unusual terminology employed by ALTA, a September 15, 2009 report using data collected by the Web Bot stated:

“It is very likely that the ‘whistleblower’ who had been described in previous ALTA reports (see 1309) as emerging out of the period of the [coagulation] of the [government/officialdom of the USofA due to financial structure collapse] is a person by the name of [Andrew D. Basiago].”

In the ALTA report was published in September, Clif High, the administrator of the Web Bot, predicted that the truth campaign of American lawyer Andrew D. Basiago will raise Mr. Basiago’s public profile “to a very high level within the mainstream media and that such presence in the media will climb over the next 9/nine months to a planetary level.”

He also stated that this person would make “a planetary impact of such magnitude that a second wave of other whistle-blowers of all kinds would be drawn into... public view.”

III. DR. DAVID L. ANDERSON AND TIME CONTROL RESEARCH

Since the September report, those following the Web Bot project by reading the ALTA reports have speculated as to who the next whistleblower to follow Mr. Basiago might be. One candidate is Dr. Anderson.

According to the physicist, he was employed at a young age by the U.S. Air Force conducting advanced research and development at the Air Force Flight Test Center at Edwards Air Force Base in the Mojave Desert.

During that time, he laid the foundations for what would be known as “time-warp field theory,” an approach that models and describes how to use the natural forces of inertial frame dragging to create contained and controllable fields of closed time-like curves.

At his Time Travel Research Center in Long Island, Dr. Anderson further developed time-warp field theory, as well as a third generation time warp generator.

Dr. Anderson sets out 10 types of time control technologies and methods, along with a feasibility analysis of each method. Among these time control technologies are quantum tunneling, time-warp fields, and wormholes.

Mr. Basiago made his public revelations about U.S. governmental involvement in time travel initially in an August 31st interview by Jessica Schab posted on YouTube and then again during a November 11th interview on Coast to Coast AM with George Noory. His revelations on Coast to Coast AM are summarized as follows.

“Andrew D. Basiago discussed his experiences within a secret DARPA program “Project Pegasus” and what he claimed to be the true history of U.S. time travel research and teleportation technology... from the years 1969 to 1972.

III. PROPOSED APPROACH

In this particular Article; I am going to talk about Traveling Through TIME as an application of Prof. Albert Einstein’s Theoretical statement i.e. “Traveling at Light Speed could nearly stop the TIME”.

COSMOS is a Colorful, Deep and Multi-Dimensional fabric which is a collection of Hidden Super-Masses [Like Black Holes] and Hidden Energies [Like Dark Energies].

COSMOS is ever-expanding with respect to the Human History of Knowledge about COSMOS and it is pushing the Stars, Planets and Galaxies apart from each other billions of miles away through Space-TIME. Though the human intelligence advanced and touched the COSMOS; there are still more Unexplained Mysteries in Cosmic Theories like Black-Holes, Dark Matter and Dark Energy etc.

Dark Energy is an unexplained Super-Massive Energy which is capable of pushing the Galaxies away from each other. Though Human senses can't experience this Dark Matter & Dark Energy; their existence persists.

COSMOS is ever-lasting Energy-Mass conversion platform and as a result; it converted the Energies into Super-Masses like Comets, Asteroids, Planets, Stars and Galaxies. Though these objects are moving away from each other; the Gravitational forces are still working through-out the COSMOS and directing these objects in a suspect-able directions and paths. We should Thank Edmond Halley and Sir Isaac Newton for proving these statements to be True.

The Greatest Speed according to Human Consciousness is been called as Light Speed which is "299, 792, 458 m / s". Achieving this speed is a Technological Nightmare to the Sci-Fi Scientists too.

But my consciousness pushes me into the deep belief that "There could be some pathways built-in already in COSMOS through which we could achieve Light Speed" and our job is just to find those pathways.

That's pretty much theoretical back ground about COSMOS. Now let's do a Travel back in Time to our High School Science.

Sir Isaac Newton; well known for his great formula $F = MA$; where $F =$ Force, $M =$ Mass and $A =$ Acceleration.

In Other words; $M = F/A$ -----
Equation 1

Prof. Albert Einstein; The Most Intelligent Physicist and the Creator of World's most famous equation i.e. $E = MC^2$ where $E =$ Energy, $M =$ Mass and $C =$ Light Speed.

In Other words; $C = \text{Sqrt. Of } [E/M]$ -----
----- Equation 2

Substitute $M = F/A$ in Equation 2; i.e. " $C = \text{Sqrt Of } ([E * A / F])$ ".

Let us assume that we have built a Space-Ship which can be Super- Accelerated to Travel at Maximum Speeds. Still achieving Light Speed is impossible because the Gravitational Forces & Cosmic forces [F] will oppose the Space-Ship speed and reduce the Space-Ship acceleration as the Speed is indirectly proportional to External forces thinking that we are traveling in the opposite direction of Space Expansion.

IV. CONCLUSION

But I am not going to quit here. Let us assume that we are Traveling in the Same Direction as the Space is expanding; then the External Forces [F] will give an additional push to the Speed of our Imaginary Space-ship. These External Forces' push is as massive as they could push the Galaxies a million miles away in minute time. So it is not a bad idea to utilize these forces and the Directional Pathway to build a Time Machine.

Otherwise; we need Exponential Energy or Acceleration to achieve the Light Speed such that our Imaginary Space-Ship could become a TIME Machine. That's All for Today. Have a Dream in Time Traveling.
